

Welcome

Welcome to the users and developers portal for the Airliner drone flight software ecosystem. Airliner is a flight software package created and released open source by Windhover Labs. The following comprises the Airliner ecosystem:

- **Airliner** - The drone command and control flight software. Sometimes referred to as the autopilot.
- **Commander** - Ground control software .
- **Pyliner** - On board and off board scripting engine.
- **Trainer** - Simulation used for testing and training.
- **Checkride** - Software certification process.
- **Workshop** - Preconfigured development virtual machine.

Start with the [Getting Started](#) guide to get a quick tour and a brief walk through of building and running the flight software.
